

SAIFULLAH JAMALI

FULL-STACK WEB DEVELOPER

hello@iamsaifullah.com | iamsaifullah.com | [LinkedIn](#) | +49 179 1668440

Based in Germany | Open to remote, hybrid & on-site opportunities

SUMMARY

Full-stack web developer with 5+ years of experience building production SaaS, e-commerce, and AI-enabled web applications. Contributed to six successfully launched commercial products across marketing, video, lead generation, and digital commerce while collaborating with distributed teams.

SKILLS

Frontend: Develop scalable, component-based interfaces with Vue.js and React, using Pinia and Redux for state management and Tailwind CSS for responsive, consistent design. Create a framework-independent, class-based widget builder in vanilla JavaScript for publishing embeddable widgets on any website with a single script tag.

Backend: Craft applications with PHP, Laravel, Livewire, and Ruby, including landing-page builders, email builders, and AI-powered tools. Design REST APIs that connect users and AI agents with product features, structure relational databases for multi-user systems and bulk-data workflows, and optimize queries for better performance.

AI-Assisted Development: Use Codex and Claude Code throughout development, creating project-specific custom skills that standardize recurring tasks such as code reviews, testing, and UI theme consistency.

AI & Product: AI integrations, agentic workflows, prompt engineering, AI tools, and products that external AI agents can operate through APIs and installable skills.

Collaboration: Git/GitHub, code reviews, mentoring, and remote pair programming.

Certifications (Microverse): [HTML/CSS](#) | [JavaScript](#) | [React/Redux](#) | [Ruby/Databases](#) | [Ruby on Rails](#)

Languages: English (Fluent) | German (Basic) | Urdu (Fluent) | Hindi (Fluent)

EXPERIENCE

Full-Stack Developer | Jeeglo

2022 - 2026

Grawt

- Architected a Synapse-based AI chat system with conversation memory and tool calling, helping users refine ideas and generate useful outputs through natural conversations.
- Delivered AI marketing tools for emails, landing pages, images, personas, and campaigns, giving users one workspace for creating marketing assets.
- Engineered embeddable JavaScript widgets that improve landing pages and lead capture and can be published on any website with a single script tag.
- Automated lead journeys across pages, forms, contacts, email sequences, delays, and custom domains, supporting campaigns from capture through follow-up.

Redeemlo

- Created a Fabric.js designer for producing branded digital and print-ready redemption cards without separate design software.
- Implemented bulk redemption-code generation and lifecycle tracking, supporting large campaigns from issuance through redemption.
- Introduced campaign management, subscriber capture, custom domains, and SSL verification, helping businesses run secure, branded campaigns and track results.

ListWeaver

- Designed an AI checklist generator that turns ideas into lead magnets, onboarding systems, launch plans, and reusable workflows.
- Added landing pages, shareable checklist links, and progress tracking, helping creators capture leads and monitor engagement.
- Produced installable AI Skills that let external AI agents create and manage checklists, pages, content, products, and workflows.

[ProductDyno](#)

- Developed an embedded AI assistant with trainable specialist skills, providing contextual product guidance and customer support.

Full-Stack Developer | Deevloopers

2021 - 2022

- Connected front-end interfaces to PHP back ends and databases.
- Incorporated third-party libraries to support end-to-end feature delivery.

Mentor (Volunteer) | Microverse

February 2022

- Mentor junior developers through code reviews, debugging support, and guidance on clean code and remote collaboration.

PERSONAL PROJECTS

[Kanban Board](#)

A mobile-responsive project-management tool with multiple boards, drag-and-drop cards and lists, collapsible workflows, color customization, persistent state, and Google synchronization across desktop and mobile devices.

[SiteSnap](#)

A responsive website-preview tool that renders any live URL across multiple device frames and captures the combined results in one screenshot, helping marketers and designers review pages without browser developer tools.

[KuickStore](#)

An affordable e-commerce platform for small businesses and social-media sellers, with product and category management, customizable storefront themes, order tracking, analytics, responsive storefronts, and operational tools.

[Brand OS](#)

An AI-powered brand workspace where marketers, designers, and copywriters define a product's voice, audience, visual identity, and brand rules, then generate reusable, brand-aware AI Skills for content, images, videos, and landing pages.

EDUCATION

FUUAST | Bachelor's Degree | 2019 - 2022

Microverse | Remote Software Development Program | 2022 | 1,300+ hours

Aptech Certified Professional | School of Information Technology

MOTIVATION

I'm excited to explore new frontiers in technology, especially large-scale distributed systems and cloud computing. The challenge of building reliable, scalable systems is what makes this field so fascinating to me. I see complex problems as opportunities to experiment, grow, and become a stronger engineer. The greater the challenge, the greater the opportunity to learn, achieve, and create meaningful impact.
